47, Knowledge Park -III, Greater Noida

**Dental Graduate Attributes**

The necessity of integrating and imbibing qualities into undergraduate curricula is becoming more and more apparent in higher professional education. Graduates must be capable of problem-solving, good communication, teamwork, cognitive thinking, and strong information technology abilities. The incorporation of these abilities into the curriculum reflects a new manner of instruction, learning, and evaluation.

The following lists the included attributes and the evaluation techniques:

**1. Professionalism & ethics:**

Method of evaluation: Undergraduates are closely observed to make sure that they are punctual for didactic lectures, labs, and clinics. Every student is expected to follow a rigorous dress code. The cornerstones of ethical codes, the policy of beneficence and do no harm, is instilled during the orientation session.

**2. Simulation of clinical exercises:**

Evaluation: Before treating patients, students must complete pre-clinical work in typhodont simulation labs. After every activity, they are assessed by qualified, experienced tutors.

**3. Theoretical and clinical knowledge and its acumen:**

Evaluation: Using "end posting tests", students are evaluated for clinical expertise following each clinical posting. Every semester, a three-hour test is used to evaluate theoretical knowledge.

**4. Research skills:**

Under the guidance of their mentors and teachers, all undergraduate students are required to do original research. An indigenous research lab is used as a resource for infrastructure.

**5. Social responsibility:**

At our institute, green campus is the norm. The use of plastics is strictly prohibited. The WHO Guidelines are followed while disposing of biomedical waste. At the source, the garbage is disposed of.

**6. Project based learning approach:**

Students are urged to regularly make projects on the specified subjects.
